Approved For Release 2001/05/23 : CIA-RDP84-00933R000400160044-5

10 November 1977

The CAMS production system was unavailable to users for approximately 18 hours on 9 November due to problems with the integrity of the data base. The program which is used to copy the data from disk to tape each day was creating erroneous records. This prevented us from being able to backup each day's transactions. A correction has been made in this program and will be installed on the CAMS system immediately.
